## Tube Gear are pleased to introduce a new range of hydraulic fittings

**BETABITE  
HYDRAULICS**

Betabite Hydraulics have been manufacturing quality, high-pressure pipe couplings for the hydraulics, gas, chemical and nuclear industries worldwide since 1966. Betabite fittings are suitable for both outside diameter and nominal bore tubes and pipes. The Betabite range of high pressure couplings, in imperial sizes, comply fully with BS 4368 part 2.

The advantages of the Betabite principle are

- three point contact with outside diameter of tube
- superior sealing qualities
- the operative will 'feel' when a perfect joint has been made
- removes possibility of overtightening
- avoids narrowing of 'necking' of thin-wall tubes
- joint may be broken and re-made repeatedly
