

INDUSTRIAL AIRLINE - Fittings

3

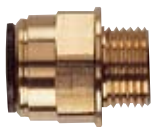

AIRLINE RING MAINS SYSTEM

The **Tube Gear** range of plastic push-in fittings has been extended to enable a complete AIR RING MAINS system to be piped from the compressor around the factory or workshop to the tools or machines.

With fittings from 4mm to 28mm a complete AIR RING MAINS system can be assembled or modified very easily without having to cut threads or use solvents to weld pipes. Although the fittings are designed for use with air through nylon tube, they can also be used with some liquids through copper or aluminium tube with a working pressure of 10 bar.

BRASS STRAIGHT STUD

Thread BSPT	Tube OD	Part No
1/2	15mm	2593
3/4	22mm	2594

BRASS WINGBACK ELBOW

Thread BSPP	Tube OD	Part No
